

ART385 Design Document for Interaction Design

The ART385 Design Document emerges from a few different sources, including traditional [software design documents](#) and interface design workflows. The idea is to convey a design and code structures that run along with it.

Re-state the Assignment

The assignment is to create a code where the RGB LED blinks without using delay().

Hand-drawn sketch

Reflections

This assignment was tough. I think it is hard getting away from delay, but it makes sense why too because when coding other things, delay will delay it all. I think the code review during class helped me to sort of understand this assignment, but I am still a bit confused.
